

## Press Images EMO Preview 2019

**Image 1**

Special multi-level reamer with adjustable edges for fine and finished machining at the stator housing. With special, individually-designed tools such as this one, LMT Tools optimally meets the growing demands of electromobility in terms of precision, complexity of components, and modern lightweight design.

**Image 2**

More efficient roughing: depending on its diameter, the new CarbFeed Hard high feed cutter for ISO-H machining offered by LMT Tools has six to eight flutes, thereby up to doubling the possible feed rate.

**Image 3**

The modular MultiEdge 2Feed mini cutting system guarantees maximum machining volumes – even on modern machining centers which are often less performant.
